Patent No. US2002015624A1

GENERAL INFORMATION:

APPLICANT: FOX. Brian

APPLICANT: HOLloway, James L.

TITLE OF INVENTION: ADIPOCYTE COMPLMENT RELATED PROTEIN

TITLE OF INVENTION: AACRP13

FILE REFERENCE: 00-96

CURRENT APPLICATION NUMBER: US/09/997,610

CURRENT FILING DATE: 2001-11-29

PRIOR APPLICATION NUMBER: US 60/253,924

PRIOR FILING DATE: 2000-11-29

NUMBER OF SEQ ID NOS: 7

SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                     GENERAL INFORMATION:

Sequence 9137, Application US/09960352

Patent No. US2002013713941

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Warren, Wesley C.
APPLICANT: Byatt, John C.
APPLICANT: Byatt, John C.
APPLICANT: Mathialagan, Nagappan
APPLICANT: Mathialagan, Nagappan
TITLE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION AND
TITLE OF INVENTION: MUSCLE AND FAT DEPOSITION
TITLE OF INVENTION: US/09/960,352
CURRENT APPLICATION NUMBER: US/09/960,352
CURRENT FILING DATE: 2001-09-24
NUMBER OF SEQ ID NOS: 15112

SEQ ID NO 9137

LENGTH: 415

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 111. Application US/09062451
Patent No. 6344550
GENERAL INFORMATION:
APPLICANT: Frudakis, Tony N.
APPLICANT: Smith, John M.
APPLICANT: Reed, Steven G.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF BREAST CANCER
NUMBER OF SEQUENCES: 297
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 9388;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                  155

                                                                                                                                                              The invention comprises the amino acid and coding sequences of six human genset metabolic genes (GMG-7A, GMG-7B, GMG-9, GMG-9, GMG-10 and GMG-11). The GMC DNA and protein sequences of the invention are useful for treating or preventing metabolic-related disorders, such as: obesity; impaired glucose tolerance; insulin resistance: Syndrome X; Type II diabetes; hyperlipidaemia; atherosclerosis; hypertension; and heart diseases (e.g. cardiac insufficiency, coronary insufficiency or high blood pressure). The GMG DNA and protein sequences of the invention may also be used as insulin sensitisers - for improving insulin sensitivity in persons with non-insulin dependent diabetes mellitus. The present cDNA sequence encodes the human GMG-9 protein.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and genomic DNAs. 5' ESTs and all length cDNAs and genomic DNAs. 5' ESTs are also used to obtain full length energy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             73 AGGCCCCCCAGAAGAAGTGGGGCCTCCTGGTGCACCAGGTTTACCACAATATACAGGAGAA 132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13 CCTGTCTTAATAACGGCAGTCATTGAGCATGTAGAAGTTGCTGGACCTCCAGCACCCC 72
New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            vasospastic ischaemia; ischaemic condition; ischaemic disease; ss.

                                                                                                                                                                                                                                                                ö
                                                    conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB19202 to AB19912, encoding the protein sequences in ABB57020 to ABB5714) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence,

The invention relates to the production of human interleukin-6 receptor (LL-6R) protein in the fungus Pichla pastoris. The fungus was transformed with an expression vector (PPIC9-A20LL) containing a generocding an IL-6R protein having an immunoglobulin-like region and cryckine receptor region and spanning amino acids from Leu20-Ala323. The human IL-6R region was PCR amplified using the primers AAAA70703. This sequence represents the coding region for the IL-6R protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes the SR345 protein. The invention relates to a method for isolating a gene encoding a membrane-bound protein, comprising introducing a vector into a cell, contacting an antigen with the cell expressing the fused protein encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gene isolation; membrane-bound protein; fusion protein; drug production; antigen-binding cell; secretable functional protein; antigenic protein; protein isolation; diagnosis; SR345 protein; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Efficient and selective isolation of a gene encoding membrane protein with low or no antigenic binding activity, for diagnosis, study of, and production of drugs treating abnormal functions of the protein -

;
by the vector on its surface to select an antigen-binding cell, and isolating the CDNA. The vector contains DNA encoding a secretable functional protein with antigenicity and binding affinity, and a CDNA ligated to DNA downstream of the 3' end of the coding sequence. The method can be used to isolate a membrane-bound protein for diagnosis and study. It can also be used for producing drugs treating abnormal functions of the protein. Such a technique is efficient and selective, which is different from the prior-art transmembrane trap (TWMT) method wherein an epitope recognised by an antibody is carried in a fused
                                                                                                                                                                                                                                                                                                                                                                  70 CCCAGGCCCCCAGAAGAAGTGGGGCCTCCTGGTGCACCAGGTTTACCACAATATACAGGA 129

The method comprises contacting one or more compounds with a chimeric protein containing at least two domains, the 1st comprising a portion of the specific molecule, and the 2nd an immunoglobulin chain portion having one or more epitopes and/or immunoglobulin regions recognising an epitope. A binding partner complex between the chimeric protein and compound(s) is formed, separated out and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening of compounds for ability to bind specific molecules - using a chimeric protein in which the specific molecule is fused to an immunoglobulin chain

```

```
This invention describes a novel gene which encodes a fusion protein of interleukin-6 (IL-6) receptor and bound with a gene sequence encoding for IL-6 at the downstream of IL-6 receptor gene. The gene and its encoding protein has applications for the growth of bone marrow stem
                                                                                                                                                                                                                                                                                               70 CCCAGGCCCCCAGAAGAAGTGGGGCCTCCTGGTGCACCAGGTTTACCACAATATACAGGA 129

contacted with a (in)directly labelled secondary molecule which binds the 2nd domain, and the label detected. Using the chimeric proteins, compounds can be rapidly screened for binding to an antigen, antibody, enzyme, enzyme substrate, receptor or ligand, e.g. in blomedical research and drug development. The method is especially intended for screening combinatorial libraries, but is also useful in screening bacterial/phage lysates, assays requiring specific binding partner interaction and obtaining binding

                                                                                                                                                                                                                                                                                                                          ö
cells and platelets. Transmission of a signal of IL-6 to target cells for stimulation with reduced antigenicity is possible. This sequence encodes the IL-6 receptor/IL-6 fusion protein described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This is a previously reported nucleotide sequence for human interleukin-6 (hIL-6). The invention relates to the finding that hIL-6 is essential for hepatitis B virus (HBV) infection. The invention provides a pharmaceutical composition for the treatment of HBV infection, comprising a soluble active agent that interacts with at least one of the binding sites between hIL-6 and the pS1 region of HBV and between hIL-6 and hepatocytes and other HBV-permissive cells. The active agent competitively binds to at least one of these sites and thereby prevents hIL-6-mediated HBV infection of hepatocytes and other HBV-permissive cells. The coluble active agent is selected from glycoprotein 80 (gp80) having receptor sites which interact with hIL-6, soluble glycoprotein 130 receptor sites which interact with hIL-6, and having receptor sites which interact with hIL-6, hIL-6 derived peptide Gly17-Glu95, hIL-6 derived peptide Glu15-HiS165, a combined I and 2 hIL-6 mutant (mhIL-6 1+2), and mhIL-6 1+2 substituted with Phel71 to Leu

This sequence represents the coding sequence for the IL-6R/IL-6 fusion protein which is cloned into an expression vector for introduction into P. pastoris. The IL-6R protein is used as a drug for amplifying myeloid stem cells and increasing platelets in blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fusion protein; human; interleukin 6 receptor; Pichia pastoris; yeast; drug; myeloid stem cell; platelet; blood; ss.

Such conjugates could be used to modulate interactions between proteins, particularly to overcome interrupted interactions caused by an incomplete interleukin-6 (IL-6) receptor. These constructs derived from IL-6 and its receptor, can also be used for an vivo expansion of human stem cells, and as a therapeutic IL-6 receptor
                                                                                                                                                                                                                                                                            Interleukin-6; IL-6; interleukin-6 receptor; IL-6R; ligand; conjugate;
                                                                                                                                                                                                                                                        Human fusion polypeptide H-IL-6 DNA containing a 18 amino acid linker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antisense oligonucleotides may be used to inhibit the expression of the interleukin-6 receptor. Inhibition of expression of the IL-6 receptor is useful in the treatment of kidney tumours, myeloma, Kaposi's sarcoma, rheumatoid arthritis, psoriasis and endotoxic shock. The antisense oligonucleotides are administered at a dosage of 0.1-100mg/kg, pref. 0.1-50 mg/kg.

This is a previously reported nucleotide sequence for human interleukin-6 (hIL-6) receptor mRNA. The invention relates to the finding that hIL-6 is essential for hegatitis B virus (HBV) infection. The invention provides a pharmaceutical composition for the treatment of HBV infection, comprising a soluble active agent that interacts with at least one of the binding sites between hIL-6 and the pS1 region of HBV and between hIL-6 and hepatocytes and other HBV-permissive cells. The active agent competitively binds of the set one of these sites and thereby prevents hIL-6-mediated HBV infection of hepatocytes and other HBV-permissive cells. The soluble active agent is selected from glycoprotein 80 (gp80) having receptor sites which interact with hIL-6, soluble glycoprotein 130 receptor sites which interact with hIL-6, soluble glycoprotein 130 derived peptide Gln15-HiL-6 derived peptide Gln15-HiL-6 derived peptide Gln15-HiS-6, a combined I and 2 hIL-6 mutant (mhIL-6, H-2), and mhIL-6, H-2 substituted with Phel71 to Leu mutant (mhIL-6, H-2), and mhIL-6, H-2 substituted with Phel71 to Leu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      70 CCCAGGCCCCCAGAAGAGTGGGGCCTCCTGGTGCACCAGGTTTACCACAATATACAGGA 129

On Dec 13, 1999 this sequence version replaced gi:3164067.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                            The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em., EMBL; Sw., SWISSROT; Tr., TREMBL; Wp., WORNEEP; Information on the WORNEEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr22 Mapping Group. Further information can be found at the Roswell RTH-30209 is from the library RPCI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                          misc_feature
                                                                                                                                                                                                                                                                                                                                                                       Libert Submitted (08-JUN-1999) Sanger Centre, Hinxton, Cambridgeshire, Caudillassis: clonerques/Esbanger.ac.uk Clone requestis clonerques/Esbanger.ac.uk
On May 14, 1999 this sequence version replaced gi:4678473.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: FMBLS. Sw.: SWISSRROT; Tr:, TREMBL.
IMPORTANT: This sequence is not the entire insert of clone 438L4.
It may be shorter because we arrange for a small overlap between neighbouring submissions.

The true left end of clone 505B13 is at 87001 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the father the father is made to resolve all sequence the father. Annotation using the 'unsure' father.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1 438L4 is from the library RPC13 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuli Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE_INDEX.html) and The C. elegans ORFeome cloning project (http://worfdb.dfci.harvard.edu/), similarity to other proteins from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. briggsae using Jim Kent's WABA aligament program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans GenBank submissions, are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).
